

Science: 666 Surveillance System

Revelation 13:16,17

And he causeth all, both small and great, rich and poor, free and bond, to receive a mark in their right hand, or in their foreheads: And that no man might buy or sell, save he that had the mark, or the name of the beast, or the number of his name. (18) Here is wisdom. Let him that hath understanding count the number of the beast: for it is the number of a man; and his number is Six hundred threescore and six (666).

Introduction (Please read this if it is your first time with this section. It is continued to a full teaching article.)

There is not a more spine-chilling chapter in the entire Bible than Revelation chapter 13. This chapter describes the rise to power of a demonically inspired world dictator, similar in nature to Adolph Hitler. He is called the Beast, but is better known as the Anti-Christ. He uses a world financial system to control the people, as no one can buy or sell unless they are linked by a mark with a number to this system. This is found in Revelation 13:16,17 with the number being 666. It seems that everyone knows about the number 666, even those with little knowledge of the Bible, as it is identified as the devil's number! This is probably one of the best known verses in all the Bible.

For centuries, the fulfillment of these verses was a mystery. The mark was believed to be a tattoo. Christians believed by faith that, just prior to the Second Coming of the Lord Jesus, a system would be in place where no one could buy or sell without this Mark. However, the understanding of these verses along with the possible fulfillment has really come into focus in the last 25 years. **(Continued) The 666 Surveillance System**

Commentary

There has been a huge breakthrough in the coming 666 Surveillance System as a Skin Tattoo was developed that allows for transmission of information from the skin! This is one of the breakthroughs I have been looking for. This Tattoo will even be able to monitor the brain.

What is needed to implement the 666 system is something that is inexpensive and easily administered to the people. This Tattoo is a long way toward that goal. What is also needed is a Tattoo that will receive radio waves as well as transmit. There is still technology needed to implement the 666 Surveillance System, but great strides have been made. You can expect more breakthroughs like this coming soon. The system is really starting to take shape before our eyes.

Everyone who rejects the Lord Jesus Christ will go under this system and will be damned for eternity. A perfect electronic mouse/man trap is being built, and we are watching it step by step.

I posted lots of good information about the 666 Surveillance System. It is all coming together like a gigantic jigsaw puzzle. Because of the prophetic word of God, we know what it is going to look like which it is not pretty.

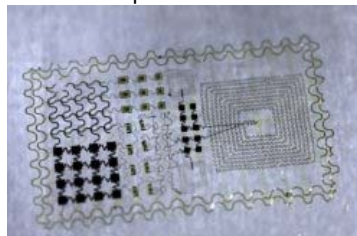

Skin Tattoo on the hand

How computers will soon get under our skin 08/12/11 These two articles go together.

Electronic skin tattoo has medical, gaming, spy uses 08/11/11 "A hair-thin electronic patch that adheres to the skin like a temporary tattoo could transform medical sensing, computer gaming and even spy operations ... The micro-electronics technology, called an epidermal electronic system (EES), was developed by an international team of researchers from the United States, China and Singapore ... **"It's a technology that blurs the distinction between electronics and biology,"**

Close up of Skin Tattoo

"Our goal was to develop an electronic technology that could integrate with the skin in a way that is mechanically and physiologically invisible to the user." **The patch could be used instead of bulky electrodes to monitor brain**, heart and muscle tissue activity and when placed on the throat it allowed users to operate a voice-activated video game with better than 90 percent accuracy. "This type of device might provide utility for those who suffer from certain diseases of the larynx," said Rogers. "It could also form the basis of a sub-vocal communication capability, suitable for covert or other uses." The wireless device is nearly weightless and requires

so little power it can fuel itself with miniature solar collectors or by picking up stray or transmitted electromagnetic radiation ... Less than 50-microns thick -- slightly thinner than a human hair -- the devices are able to adhere to the skin without glue or sticky material."

Scientists Turn Memories Off and On With Flip of Switch "Scientists have developed a way to turn memories on and off -- literally with the flip of a switch. Using an electronic system that duplicates the neural signals associated with memory, they managed to replicate the brain function in rats associated with long-term learned behavior, even when the rats had been drugged to forget."

Scientists 'decode' human brainwaves Once brain activity is identified and able to be monitored, it will not be too long until this can be tied into the Skin Tattoo. The coming world-wide Wi-Fi system will tie this all together into one huge web. In a real way, this system will be like the movie The Matrix where all thinking and reality is controlled and people do not know it!

Articles

We've got you under your skin: Battery-free surveillance device that can be implanted under the flesh All that is needed is to have this technology merged with my featured article and you have the Mark of the Beast that would be the heart of the 666 Surveillance System!

"A new generation of battery-free surveillance devices which can be implanted under the skin and transmit over huge distances via wireless have been developed by scientists. Researchers are working on nano machines that could be injected into the arms of patients and then report back to doctors who are monitoring them from miles away. They would be powered by the motion of a person walking or even the pulse of a blood vessel so would never stop working until the person died."

person thinking, or even the pulse of a blood vessel, or read her or stop working with the person else.

NSA Is Building An Artificial Intelligence System That Can Read Minds

The coming system will be able to monitor thinking as it will be all tied together through Wi-Fi. With the skin-tattoo people will be monitored through the wireless Internet! Even one's thoughts can be monitored! This will be total surveillance of the people with no way out.

"Think of *2001: A Space Odyssey* and the most memorable character, HAL 9000, having a conversation with David. We are essentially building this system. We are building HAL. The system can answer the question, 'What does X think about Y?'" These are the words of an unnamed researcher who discussed an amazing artificial intelligence system she was building at the NSA. It sounds like something right out of science fiction -- a system that can literally read thoughts like a magician."

Big Brother is watching you: The town where EVERY car is tracked by police cameras

This is all happening so fast! Everything is going to be tracked and monitored in this system.

DHS Funds Real-time Spy Cams on SF Buses This is part of monitoring everything. **Scientists Successfully Implant Chip That Controls The Brain; Allowing Thoughts, Memory And Behavior To Be Transferred From One Brain To Another** This is all part of the mind control that is coming under the 666 Surveillance System.

Long-Range Facial Recognition Tech These two articles go together about scanning and screening people so there is no hiding from this coming Surveillance System. Everything you can imagine is going to be electronically webbed together for total control of the people.

Homeland Security Mobile 'Malintent' Pre-Crime Screening System to Scan Americans at Large Events Passes First Round of Testing This is just starting. Soon these systems will be everywhere and through the skin tattoo will be able to monitor a person's movement!

Patients Check In At NYU Hospital With Hand Scan

Beyond Cell Phone Wallets, Biometrics Promise Truly Wallet-Free Future This is the type of technology that is tied directly to the 666 System. When the Skin Tattoo is fully operational, this will be used to insure that no one can buy or sell without being in the 666 Surveillance System.

'Smart' cities will likely link devices intelligently This is the coming Wi-Fi system that the Skin Tattoo will be tied into. This is the future of man under the control of the Antichrist's 666 Surveillance System.

Revelation 14:11 And the smoke of their torment ascendeth up **for ever and ever**: and they have no rest day nor night, who worship the beast and his image, and whosoever receiveth the **mark** of his name.

How computers will soon get under our skin

A stick-on circuit can monitor heart rate as well as conventional devices, but is weightless, wireless and inconspicuous

By Steve Connor, Science Editor

Friday, 12 August 2011

It may soon be possible to wear your computer or mobile phone under your sleeve, with the invention of an ultra-thin and flexible electronic circuit that can be stuck to the skin like a temporary tattoo.

Click [HERE](#) to view graphic (87k jpg)

The devices, which are almost invisible, can perform just as well as more conventional electronic machines but without the need for wires or bulky power supplies, scientists said.

The development could mark a new era in consumer electronics. The technology could be used for applications ranging from medical diagnosis to covert military operations.

The "epidermal electronic system" relies on a highly flexible electrical circuit composed of snake-like conducting channels that can bend and stretch without affecting performance. The circuit is about the size of a postage stamp, is thinner than a human hair and sticks to the skin by natural electrostatic forces rather than glue.

"We think this could be an important conceptual advance in wearable electronics, to achieve something that is almost unnoticeable to the wearer. The technology can connect you to the physical world and the cyberworld in a very natural way that feels comfortable," said Professor Todd Coleman of the University of Illinois at Urbana-Champaign, who led the research team.

A simple stick-on circuit can monitor a person's heart rate and muscle movements as well as conventional medical monitors, but with the benefit of being weightless and almost completely undetectable. Scientists said it may also be possible to build a circuit for detecting throat movements around the larynx in order to transmit the information wirelessly as a way of recording a person's speech, even if they are not making any discernible sounds.

Tests have already shown that such a system can be used to control a voice-activated computer game, and one suggestion is that a stick-on voicebox circuit could be used in covert police operations where it might be too dangerous to speak into a radio transmitter.

"The blurring of electronics and biology is really the key point here," said Yonggang Huang, professor of engineering at Northwestern University in Evanston, Illinois. "All established forms of electronics are hard, rigid. Biology is soft, elastic. It's two different worlds. This is a way to truly integrate them."

Engineers have built test circuits mounted on a thin, rubbery substrate that adheres to the skin. The circuits have included sensors, light-emitting diodes, transistors, radio frequency capacitors, wireless antennas, conductive coils and solar cells.

"We threw everything in our bag of tricks on to that platform, and then added a few other new ideas on top of those, to show that we could make it work," said John Rogers, professor of engineering at the University of Illinois at Urbana-Champaign, a lead author of the study, published in the journal *Science*.

Electronic skin tattoo has medical, gaming, spy uses

Aug 11 03:43 PM US/Eastern

A hair-thin electronic patch that adheres to the skin like a temporary tattoo could transform medical sensing, computer gaming and even spy operations, according to a US study published Thursday.

The micro-electronics technology, called an epidermal electronic system (EES), was developed by an international team of researchers from the United States, China and Singapore, and is described in the journal *Science*.

"It's a technology that blurs the distinction between electronics and biology," said co-author John Rogers, a professor in materials science and engineering at the University of Illinois at Urbana-Champaign.

"Our goal was to develop an electronic technology that could integrate with the skin in a way that is mechanically and physiologically invisible to the user."

The patch could be used instead of bulky electrodes to monitor brain, heart and muscle tissue activity and when placed on the throat it allowed users to operate a voice-activated video game with better than 90 percent accuracy.

"This type of device might provide utility for those who suffer from certain diseases of the larynx," said Rogers. "It could also form the basis of a sub-vocal communication capability, suitable for covert or other uses."

The wireless device is nearly weightless and requires so little power it can fuel itself with miniature solar collectors or by picking up stray or transmitted electromagnetic radiation, the study said.

Less than 50-microns thick -- slightly thinner than a human hair -- the devices are able to adhere to the skin without glue or sticky material.

"Forces called van der Waals interactions dominate the adhesion at the molecular level, so the electronic tattoos adhere to the skin without any glues and stay in place for hours," said the study.

Northwestern University engineer Yonggang Huang said the patch was "as soft as the human skin."

Rogers and Huang have been working together on the technology for the past six years. They have already designed flexible electronics for hemispherical camera sensors and are now focused on adding battery power and other energy options.

The devices might find future uses in patients with sleep apnea, babies who need neonatal care and for making electronic bandages to help skin heal from wounds and burns.
